DISTRICT LEADERS

Help families find care sooner.

A school can make care easier to find through channels families already use: pickup conversations, a principal's note and the school newsletter.

WHAT TAP HAS REPORTED

2.5 days

sooner back to school

TAP's founder reports that children returned to school sooner. The sample, reporting period and comparison are unavailable. This is not an annual reduction in absence days or a forecast for your district.

A PROPOSED 90-DAY PILOT

Start small enough to learn.

DAYS 1–30 — **Listen and choose.**
Name a nurse reviewer and a parent representative. Confirm local eligibility, language needs and one trusted channel.

DAYS 31–60 — **Try one school or grade.**
Share the parent guide and the short film. Ask whether families could find the access page and understood what to do next.

DAYS 61–90 — **Review before expanding.**
Look at aggregate reach, access-page visits and optional anonymous feedback. Attendance analysis needs a defined period, comparator and privacy review.

BRING TO A PLANNING CONVERSATION

Which families would this help us reach?

Evidence, sources and school tools: taptelehealth.com/schools

We put a doctor in your family, not just a family doctor.
