SCHOOL NURSES

A useful next step at pickup.

When a caregiver cannot reach the pediatrician, you can point them toward another option and keep the medical conversation with the family.

WORDS YOU CAN USE AT PICKUP

> “If your household has TAP, you can text the care team from home. This page lets you check your community and save the contact. A parent or guardian starts the visit.”

IN THE HEALTH OFFICE

01 **Use the school’s usual process first.**

Assess the student, notify the caregiver and follow school pickup and documentation procedures. For an emergency, follow your response protocol and call 911.

02 **Hand the guide to the adult.**

Offer the parent guide or access page. The caregiver contacts TAP directly. Do not send a roster, student health record or clinical details through the outreach site.

SEND HOME WITH A CAREGIVER

Give the family a place to start.

A TAP conversation does not clear a child to return. District illness rules and the clinician’s instructions still apply.
